

how to measure | ROMAN SHADES

1 getting started

Use a metal tape measure for accurate measurements. Measure each window separately even if they appear to be the same size, recording to the nearest 1/4".

2 choose your mount type

We recommend measuring for both mount types. Both are mounted with a 1 1/4" deep header.

OUTSIDE MOUNT

Mounted to wall or ceiling. Minimizes light seepage, makes windows appear larger, and hides uneven frames.

INSIDE MOUNT

Mounted inside frame must be at least 3/4" deep, 1 1/2" for it to be flush. Suggested if combining with other treatments.

3 measure & calculate size

4 *order your size*

Outside Mount: Enter the Shade Width (C) & Shade Length (F) online.

Inside Mount: Be sure the depth of your window will accommodate an inside mount (see measurement Z above). Then enter the Width of Inside Frame (X) and Length of Inside Frame (Y) online. If you don't plan to close the shade, your length can be shorter than (Y), if you wish it to fully close, be sure it is at least as long as (Y).
